

KBE System_70mm

ENVIRONMENTAL FRIENDLINESS

“KBE” window profiles are manufactured following the “Greenline” system for several years now, since this technology uses calcium and zinc instead of the lead, which was used beforehand.

“Greenline” profiles meet the requirements of the Directorate-General for Environment of the European Union, which advises to avoid using lead as a stabilizer in the industrial production. For this reason, the heavy metals are not used in the process at all, starting from the production of the raw material up to the end of the processing.

The windows of the “Greenline” profile generation, stabilized without lead, are a significant contribution to environmental protection, as well as a guarantee of the quality, cost efficiency and durability.

KBE System_70mm

QUALITY

"KBE" window profiles are manufactured using the materials that are of an exceptionally high quality, applying modern technologies and the most modern equipment. The production of the PVC profiles is constantly controlled by the German and international control institutes, as well as have received even several certificates, such as ISO 9001, RAL and CSTB among others.

DESIGN

"KBE" system windows are manufactured using the newest technology and meet all of the architectural requirements for the modern windows. Everyone will be happy with the elegant appearance of the 70 mm "KBE" profile.

The windows may be traditionally rectangular or trapezoidal, triangular, round and arched as well as single or multi-hinge – everything is possible with "KBE". A variety of shapes gives you the freedom of choice!

Decorative dividing strips extend the possibilities for the window design even more.

By choosing your favourite wood imitation or colour, you will be able to turn your home into an attractive architectural highlight.

WINDOWS

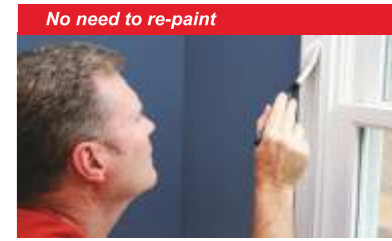

A wide profile of 5 chambers isolates the rooms from the outside noise even more. When using the window construction "KBE" 70 mm, there is a possibility to insert a thicker glass units, which insulate the sound. If you will not be distracted by the extraneous sounds, then you will be able to focus on the works that you are doing and have a peaceful sleep.

These windows will help you to preserve the warmth and cosiness of your home. The wider profile allows using the glass unit with the higher amount of chambers, since they significantly reduce the emission of heat into the environment. The "KBE" system windows of 70 mm help to preserve the warmth, which is collected in your house better; therefore, you will reduce your expenses for heating and will contribute to the environmental protection.

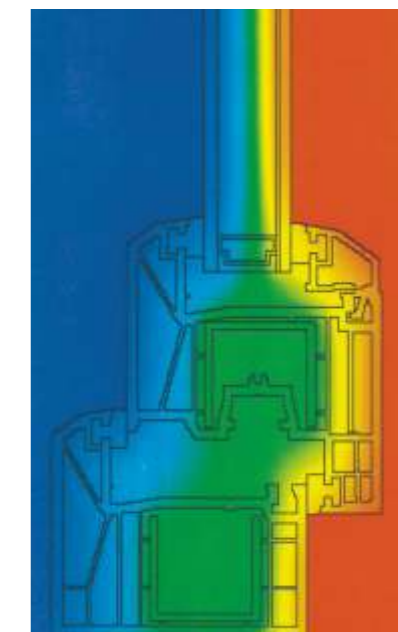

"KBE" specialists have also solved the problem regarding the security of your home. These window systems allow fastening reliable fittings, protecting from break-ins, as well as inserting thicker glass unit, which increases the security of your home. Moreover, the windows are easy to maintain.

Cosiness, beauty, security and domestic comfort is everything that a person needs. Therefore, when choosing the windows, you should not compromise, but search for the solutions, improving the quality of modern housing.

-  **Better sound insulation**
-  **Improved preservation of the warmth**
-  **A higher level of security**
-  **Easy maintenance of the windows**
-  **Attractive design**

"KBE" window systems with the outer sealing, which is 70 mm wide.

Optimal distribution of the isothermal curves in the profiles
