

## Door system

## Parallel sliding-tilting door

**KÖMMERLING®**

# The suitable door for *your world*

Doors and windows form part of your living space and your own personal living environment. You should therefore give your full attention to your decision for the right door system.

## Link between house and garden

It is never too late to make your living environment more beautiful, more worth living in, and more comfortable. In particular renovations benefit from the parallel sliding-tilting door. With its slender profiles it can be integrated easily in the available space. And don't be afraid of the installation. That's over in a jiffy.

The greenline symbol represents our new profile generation stabilised free of lead. Watch for this when you want to benefit yourself and the environment.

## High tightness and the optimal handling ease

For smaller sliding elements, the parallel sliding-tilting door is the ideal complement to the established lift/sliding door. Different to this, the sashes on the parallel sliding-tilting door can be tilted. The parallel sliding-tilting doors are made of the usual window profiles and so ensure a very high tightness owing to the sealing, which extends over two or three sealing levels, depending on the system. This benefits the thermal and sound insulation.

- ▶ Wide range of opening modes
- ▶ Stable profile cross section with outstanding static properties for long service lives
- ▶ User definable measurements: sash sizes depending on the system up to 1.90 m wide x 2.10 m high
- ▶ Profiles of lead free rigid PVC-U stabilised with eco friendly calcium and zinc
- ▶ Excellent thermal and sound insulation properties

### 1 Slide position

The sliding sash is dropped on the parallel and pushed open on the side. You then open your living space on to the garden with ease.

### 2

### Tilt position

For room ventilation, the sliding sash can be tilted without danger from storms, but is secured against opening from the outside.

### 3 Fastening position

At this position the sliding sash is locked over its circumference with a central locking system.

## Opening modes

two-part element with sliding sash and fixed glazing

three-part element with sliding sash and two fixed panes

four-part element with two sliding sashes and two fixed panes

three-part element with two sliding sashes and fixed glazing

two-part element with sliding sash and side-hung sash

three-part element with sliding sash and two side-hung sashes

four-part element with two sliding sashes and two fixed panes
